

CATERPILLAR RING BACKUP 1476604 NEW

Product Images

Description: Backup rings prevent seal extrusion in high pressure applications and help protect the life of overall sealing system from pressure surges. Attributes: backup rings are designed in conjunction with the elastomeric seal and mating components to contribute significantly to the life and performance of the sealing system in high pressure applications. They may be solid or split depending on the application requirements. Backup ring dimensions are consistently held to tight tolerances to ensure they properly bridge the seal groove and the mating surface. Materials are selected for their pressure and abrasion resistance. sealing system uses a robust design, testing, and validation process. Buy the latest Genuine seal to protect your investment. Applications: Backup rings are used in high pressure static and dynamic sealing applications, such as hydraulic pumps, valves and engine systems.
