

CATERPILLAR FILTER AS 1238189 NEW

Product Images

Description

Smart equipment owners protect their machinery – and livelihood – when they choose genuine Cat filtration products. Cat Standard Efficiency Hydraulic and Transmission Filters are designed to maintain system cleanliness and integrity in most normal and light duty applications. Your first defense against component wear due to oil contamination, Cat Filters deliver quality, consistency and on-machine performance, resulting in superior filtration. Transmission-specific filters are designed to hold more contaminants and offer longer service intervals in these systems, so using the correct filter at appropriate maintenance intervals is critical. Ensuring proper lubrication of your equipment’s hydraulic and transmission systems reduces repair costs and increases uptime for your income-generating iron, which is why choosing Cat Filters is a good business decision. Cat maintenance products are designed by the same company that manufactures your machinery, so you can count on our filter elements to deliver superior fit and performance every time. If you’re not using Cat Filters, it’s easy to replace your will-fit filters with genuine Cat Elements. Make the switch by contacting your local Caterpillar dealer or searching by part number at catfiltercrossreference.com.

Attributes:

- Designed by Caterpillar to be an integrated component of your hydraulic system.
- Only available from Caterpillar.
- No one knows Cat Hydraulic Systems better than Caterpillar.
- Cat Filters perform better than will-fitters – see the test results
