

CATERPILLAR PISTON A 6E1109 NEW

Product Images

Description

Description:

The purpose of the hydraulic piston is to separate the two opposing zones of pressure in a hydraulic cylinder assembly. The piston contains machined grooves for wear rings that ride on the inside surface of the cylinder assembly to prevent damage and scoring of the piston or cylinder assembly. It also contains machined grooves that will house seals. The seals prevent pressurized oil from passing the piston from one side of the cylinder cavity to the other.

Attributes:

- Piston assembly with spacers, insert, plungers, and seal assembly
- Piston OD: 113.3 mm (4.46 in)
- Piston ID: 38 mm (1.5 in)

Application:

Consult your owner's manual or contact your local Cat Dealer for more information.
