

CATERPILLAR 2144285 PLATE AS-B NEW

Product Images

Description

Description:

Isolation mounts are used to attach and position systems, accommodate displacement, and isolate components from the surrounding structure (vibration, shock, noise).

Two-Piece Mounts are extremely versatile and are available in symmetrical (two mounts) and non-symmetrical (mount plus pad) designs. They are installed into a bore on a support plate, and are bolted through a center sleeve, which may be bonded or loose.

Attributes:

- Rubber pad bonded to steel plate
- For use with M8 mounting hardware
- Mounting Systems are designed to reduce stress and strain on mounted components to increase their durability and performance life, and to contribute to operator comfort. The entire system (mount design, material selection, placement, hardware, etc.) is optimized and validated to meet specific application requirements.

Application:

Consult your owner's manual or contact your local Cat Dealer for more information.
